StartERP
AI BUSINESS OS

For dishdasha & thobe tailoring houses in Kuwait

Run your tailoring house from one screen

From the measurement at the counter or at the customer's home, through cutting, stitching and finishing, to the pickup, the KNET payment and each tailor's pay: StartERP is built for the way Kuwaiti tailors work.

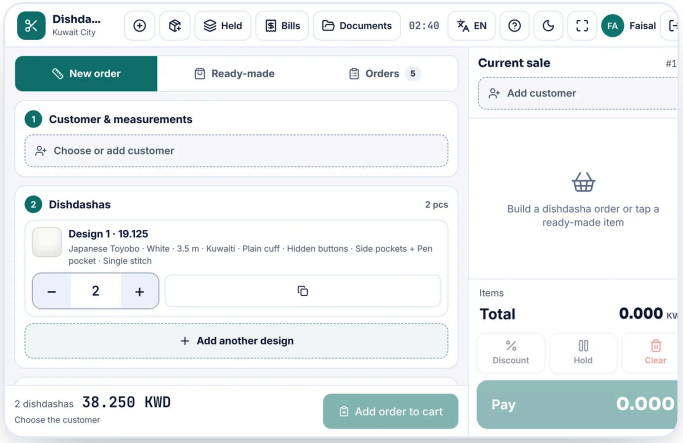

- ✓ Kuwaiti dinar, 3 decimals
- ✓ KNET & cards
- ✓ Arabic & English
- ✓ No VAT
- ✓ Works offline

StartERP

The dishdasha designer and the ready-made shelf, on one POS

New order: the dishdasha designer

Ready-made: ghutra, agal and bisht in the cart

Design each dishdasha

Fabric from your shelf by the metre (about 3.5 m a piece) or the customer's own; Kuwaiti collar first, then round, Saudi, Qatari, Emirati or mandarin; cuff, placket, pockets, embroidery or hand finishing, lining.

Family measurement cards

Each customer's measurements saved on their card, with the sons and brothers on the same family account. The next order starts from the last one.

Normal, express or Eid rush

Pick the service and the pickup day from the capacity calendar, so you only promise days your workshop can meet.

Deposit now, balance at pickup

Take the deposit by KNET, card, Apple Pay, transfer or cash; the order number (DS-…) goes on the receipt and to WhatsApp.

Ready-made goods with pictures

Ghutra and agal, bisht (sold or rented), cufflinks and qahfiya, fanila and wizar, Moroccan jellabas: tap to add, with real product photos.

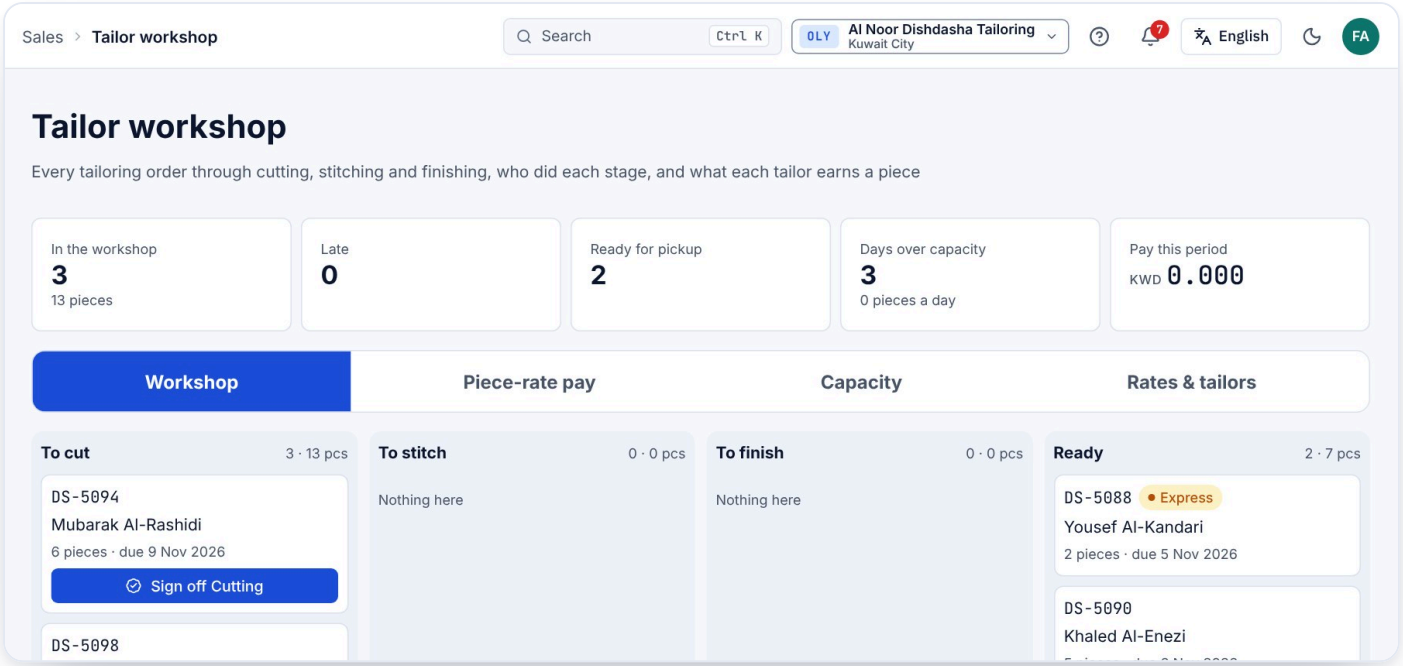

Colour & size

Sell by colour and size and see what is left of each.

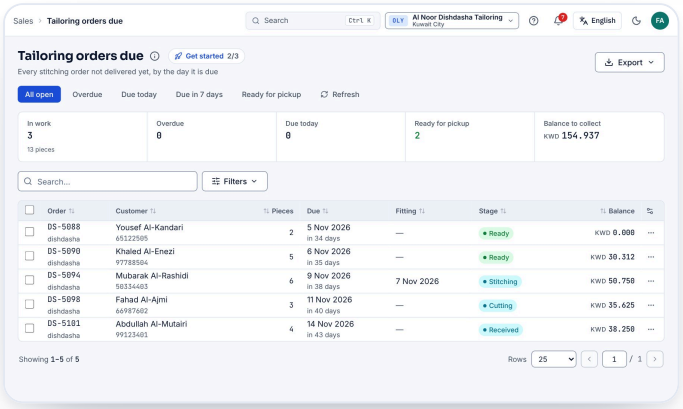

Tablet, phone or PC

The same counter on an iPad, an Android tablet, a phone or the Windows app, online or offline.

Every order from cutting to pickup, every tailor paid by the piece

Tailor workshop: cut, stitch, finish, ready

Tailoring orders due

Tailoring orders due

One board by the day each order is due: overdue, due today and this week, ready for pickup, and the balance still to collect.

Tailor workshop

Each order moves through cutting, stitching and finishing with the tailor who did each stage, signed off on the screen.

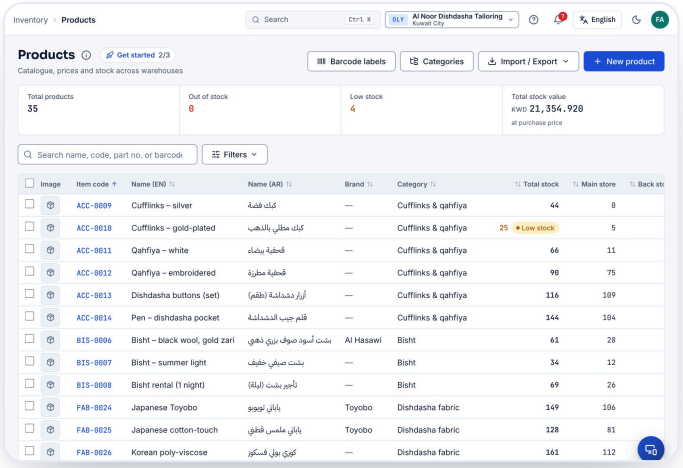

Piece-rate pay

Your own rate per piece for each stage, with extras for embroidery, hand finishing and express; each tailor's pay for any period.

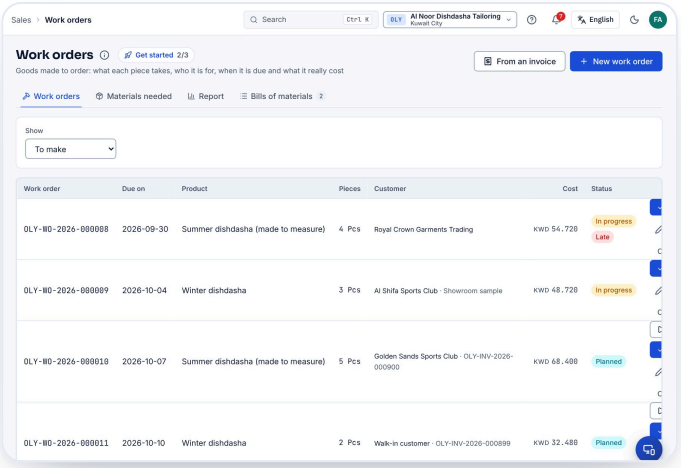

Capacity before Eid

The pieces due each day against what your tailors make, so the Ramadan and Eid rush is planned, not guessed.

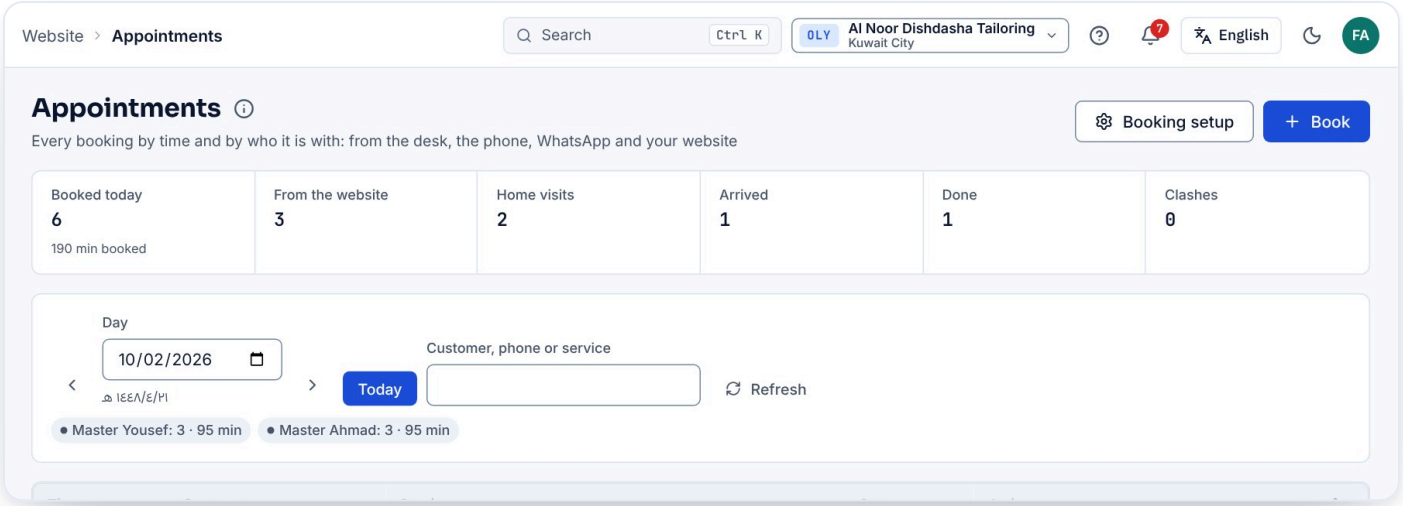

Know your fabric, cost every piece, book home visits

Products: fabric by the metre and ready-made goods

Work orders with their real cost

Appointments with home measurement visits

Fabric by the metre

Japanese Toyobo, Korean, Swiss voile and winter wool by the metre per branch, with low stock flagged; ready-made goods by the piece.

Bill of materials & work orders

What one dishdasha takes (fabric, buttons, thread, labour); a work order takes the materials out of stock and gives the real cost of each piece against the standard.

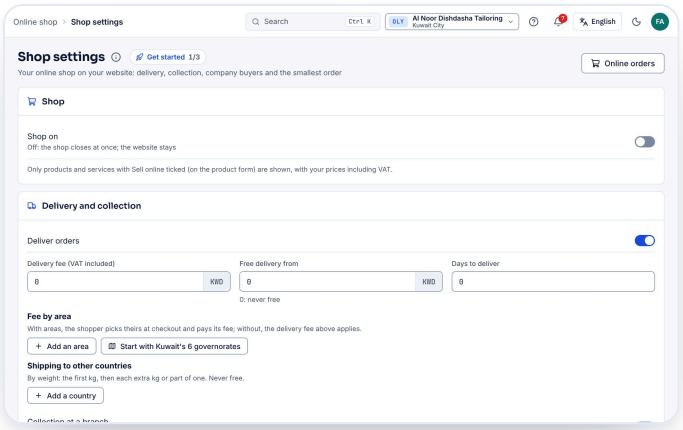

Home measurement visits

Customers book a visit on your website or you book it from the desk: the area and address with a map link, and travel time kept free between visits.

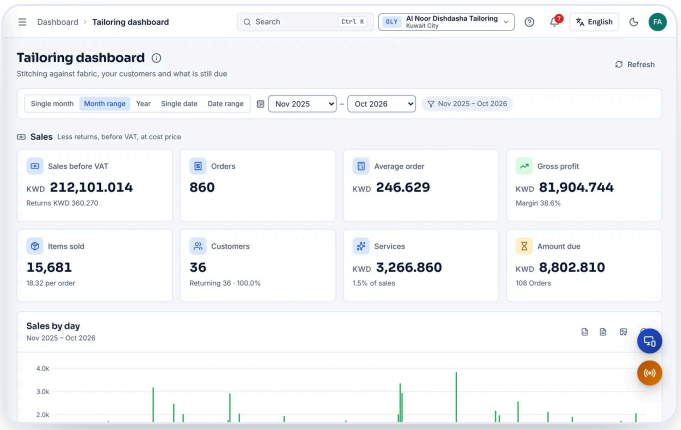

Appointments board

Every fitting and measurement of the day by tailor, from the desk, the phone, WhatsApp and the website, with no double bookings.

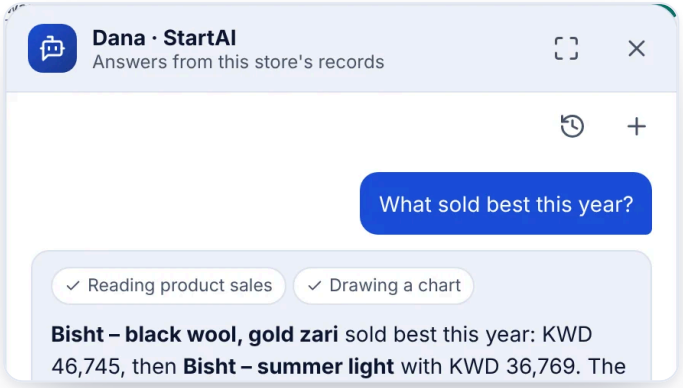

Your own website and shop, and a business you can talk to

Shop settings: delivery per area and collection

The tailoring dashboard

StartAI answers from your own records

StartAI Radio

Website & online shop

Your own site in Arabic and English with a shop: Kuwaiti addresses (area, block, street, house), delivery fees per governorate, GCC delivery by weight, collection at a branch.

KNET online

Shoppers pay by KNET or card on Tap's secure page; Tap pays you directly, and every order waits on the Online orders board until you accept it into an invoice.

A dashboard for tailors

Sales by service and product, orders in work, top sellers and the money to collect, on PC and phone.

StartAI and StartAI Radio

Ask in Arabic or English "what sold best this month?" or "which orders are late?", and hear the shop's news read aloud each morning.

Everything your workshop needs, in one system

Start with the modules your workshop uses today and switch on more as you grow; each one is ready in minutes, with your data already in place.

Recommended for your workshop
