# See next month before it happens

## AI Predictions

**Sales up to a year ahead**

**Stock-outs seen in advance**

**Customers likely to leave**

**Every forecast's error shown**

For every kind of business: shops, restaurants, clinics, salons, showrooms and more

Prices on request

Know your sales for the next 4 weeks, 3 months, 6 months or a whole year with a safe range, each from the forecasting method that was most accurate on your own past periods of the same length, and see its measured error.

# Six boards, one screen

### Sales outlook
The next 4 weeks, 3, 6 or 12 months, day by day and week by week, with a safe range.

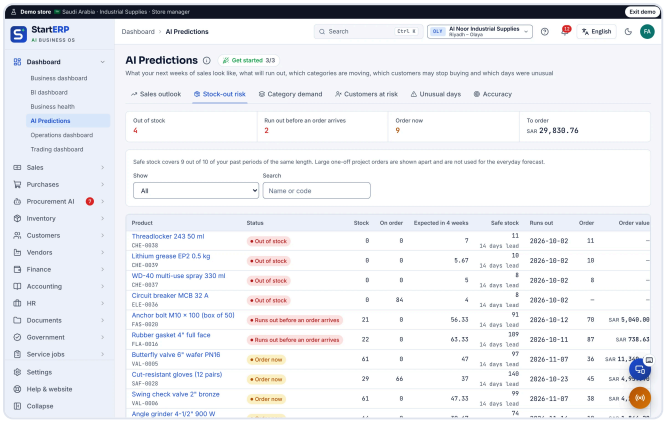

### Stock-out risk
What runs out before an order can arrive, and how much to order.

### Category demand
Expected units for the next 4 weeks and how each category moved.

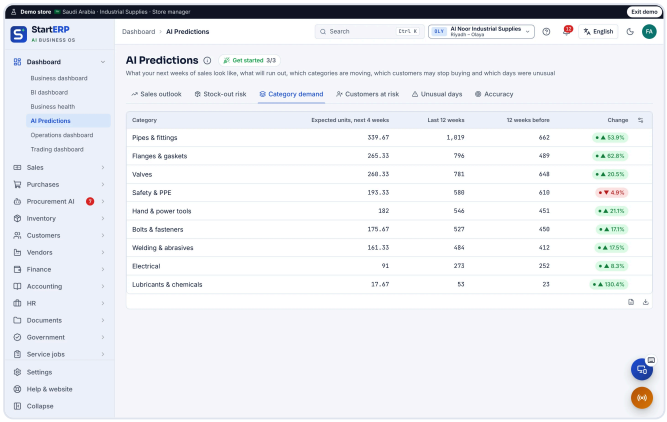

### Customers at risk
Regular customers likely to stop buying in the next 90 days.

### Unusual days
Days far above or below the usual for their weekday.

### Accuracy
Every method's measured error, and the one in use.

Stock-out risk

Category demand

## Accuracy you can check

- Several forecasting methods compete on your own last four 4-week periods, forecast as if they had not happened yet. The one with the smallest error is used, and you see that error.
- Once a week, machine-learning models (Chronos-2, LightGBM and statistical models) run on AWS on the same four periods. Their forecast is used only when it is more accurate.
- In our tests on four years of an industrial supplier's sales, the next 4 weeks' total was within 3% to 8%.
- Each business type sees the boards that fit it: a clinic sees its patients, a salon its clients, and a business that sells only services has no stock boards.
- Single products sell in lumps, so stock uses a safe level that covers 9 of 10 past periods; big one-off project orders are kept apart.

Only daily sales totals leave the app for the weekly run: no names, no customers, no products.

## Get started in 3 steps

1. **Keep selling as usual**
   About two months of sales start it.
2. **Read the sales outlook**
   Up to a year ahead, with a safe range.
3. **Order what will run out**
   Stock-out risk with the quantity to order.

**StartAI and StartAI Radio read it too: ask “what will I sell next month?”**

**Try it in the live demo** starterp.org
